

BEVERLY HILLS
IV Therapy

Introduction

California is all about appearance, health, and longevity. This is why celebrities are flocking to Beverly Hills IV Therapy. Our specially formulated IV Infusions help promote all aspects of wellness and beauty. Come and find out why we have taken Hollywood by storm! While in the Maldives, enjoy and rejuvenate. Do so, at the luxurious Drift Spa while receiving another spa treatment, or in the comfort of your own Villa. Also, ask about our IV packages.

What is IV Therapy?

Most people are deficient in much needed vitamins and minerals. Everyone thinks they can correct this with multivitamins. Doing so will only help partly. IV Therapy replaces the missing nutrients, minerals and vitamins in a pleasant setting via an intravenous solution (IV). Our menu includes a wellness approach for several life situations.

What are the Benefits of IV Therapy?

In most cultures today people push their bodies to the absolute limit, IV Therapy is crucial in addressing deficiencies at the cellular level. Unlike when vitamins and minerals are introduced via the digestive system, there's no need to wait for our formulations to work. Because IV Therapy is delivered directly to the bloodstream, it is effective immediately.

**Note: All procedures must be overseen by a licensed Physician*

What does IV Therapy treat?

IV Therapy is a safe and effective treatment for a wide range of modern health concerns, including stress and fatigues.

FAQ's

1. How does IV Therapy work?

IV Therapy is a procedure that uses an intravenous drip to infuse essential vitamins, minerals, and amino acids directly into the body. The advantage of this is that higher levels of nutrients can often be introduced into the body (at 100% absorption rate) than would be possible, if taken orally (which is usually 10% - 30%).

2. How often should I get IV Therapy?

How often or at what intervals you should get intravenous therapy depends on the specific type of treatment you are getting, since each patient's treatment is customized.

3. I'm scared of needles – will it HURT?

Most people barely feel the IV placement, and many don't feel it at all. A specialized Nurse or Doctor will place a small 22 gauge needle, after pre-treating IV after pre-treating the skin with a very cold "freeze" spray called "Pain Ease" to minimize discomfort.

4. What can I expect during my treatment?

Most of the IV drips take anywhere between 15-30 minutes during which time a patient can combine another spa treatment, read a book, listen to music, or just relax in the comfort of your own Villa. Once the IV Therapy procedure has started, you will be reclined in a comfortable chair as the drip is administered.

5. Does IV Therapy work?

There is a growing body of scientific evidence documenting the efficacy of vitamin/nutrient IV Therapy. Plus, just ask our many happy clients!
